SELECTED PROJECTS

Unsupervised Lower Dimensional Representation Learning for Time Series Data

- Designed a novel autoencoder-based architecture to generate lower dimensional vector embeddings for time series such that they exhibit resilience to warping in local neighborhoods.

Messenger Application for Student-Teacher Interaction (Team Project)

- Provided APIs to log actions, automatically extract error locations, a Diagnostics API to locate errors in production version and a Telemetry module and API to gather user info.

Patient Account Management Software

- Created modules for medical and inventory bill validation and settlement for a software designed to help the Government District Hospital Palakkad automate their operations.
